

Governance, Risk Management, and Compliance

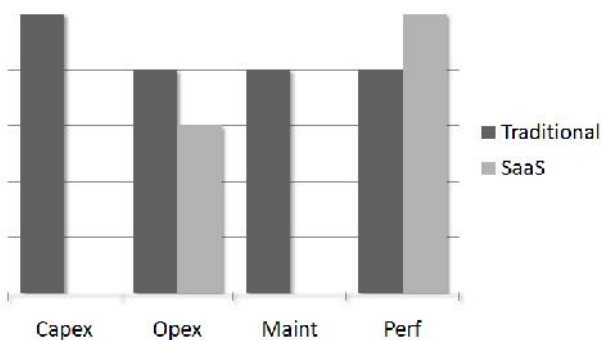

SAP BusinessObjects GRC Software as a Service

There is a significant trend for organizations transitioning from traditional in-house managed hardware and software to Cloud Computing and where possible, Software as a Service (SaaS). Cloud computing provides better performance at lower cost due to the flexibility, scalability, and economy of scale. SaaS relieves the organization of all maintenance headaches and complexities, whilst still benefiting from the use of powerful software. SaaS concepts convert costs from Capital Expenditure to Operating Expenditure, and thus remove a barrier for the use of the software.

IncQ Consulting is the only service provider of SAP Business Objects GRC Software as a Service (SaaS).

The Fortune 500 CIO survey of top technology segments of 2010, showed that Cloud Computing was of the number 1 interest of CIOs for 2010 and Software as a Service (SaaS) was number 6. This is because CIOs recognize the significant value that Cloud Computing and SaaS offers their organization. These benefits include:

- No upfront Capital Expenditure
- No hardware or software maintenance headaches
- Lower Operating Costs due to the pay-as-you-use

SAP BusinessObjects GRC consists of a set of software solutions that offer significant benefits to your organization. These software solutions include:

- **Strategy Management**
Define and communicate your business objectives, manage initiatives designed to reach your business objectives and then monitor and manage performance from high-level objectives down to key performance indicators.
- **Risk Management**
Balance business opportunities with strategic, operational, financial, legal and compliance risks to maximize corporate performance and minimize the market penalties from high-impact events.
- **Process Control**
Ensure operational excellence and compliance via centrally, and automatically monitoring key operational controls and data across enterprise systems.
- **Access Control**
Control access and prevent fraud across the enterprise with confidence, whilst minimizing the time and cost of compliance.

Our philosophy at Inc Q Consulting is to **Question the status quo; drive change to optimize business performance.**

Offering SAP BusinessObjects GRC Software as a Service is one way we can help you optimize your business performance whilst minimizing your costs and complexity.
